I showed this frame plate flaw at the last MSC weekend event in my 'Non Catalogued key Plate Display'.. I have 3 copies of this variety (position unknown) – this one has a lovely dated 18 July 1918 postmark proving this was around from the early printings.. I still haven't seen recorded on an Overprinted example yet so maybe not present on later printings?.

£32

Another early dated copy showing the MSC study paper listed flaw 'Break in frame after E' – as stated in my display the actual flaw looks nothing like the example illustrated in the study paper !

Another one of my new constant plate flaw discoveries (Row 3-1) showing the 'joined EN' overprint flaw
